

Sustainable Maguro

FARMED

BLUEFIN TUNA

Our Bluefin tuna is fully farmed, from fingerling to fully grown, by Japanese most experienced fish farmer.

With several farms all over Japan we can deliver a reliable output of high-quality fish, all year around.

The lifecycle of our tuna is strictly controlled, so that we can offer a product that is safer and of a more consistent quality than wild caught tuna.

Farmed tuna is a sustainable alternative to wild capture that will guarantee the availability of Bluefin tuna for future generations.
